# COMPUTERIZED SYSTEMS AND METHODS FOR MANAGING PROJECT ISSUES AND RISKS

## ABSTRACT OF THE DISCLOSURE

[0058]    A method and system of processing raw images for display.  First, a processor corrects the raw images with respect to an offset image to generate an offset corrected image.  Next, a level of the offset corrected image is adjusted with respect to a gain adjust by employing saturation arithmetic to clip the level of the offset corrected image to generate a gain corrected image.  Next, a window of the gain corrected image is adjusted with respect to a reference window to generate an output image.  Next, the output image is packed into a register for display.
